Septic Tanks

Alternative Drainage provides domestic and commercial septic tank services to homes and businesses across Yorkshire and Nationwide.

A Septic Tank exists where main sewers are not present and can be found mainly in rural areas.

The septic tank collects and stores sewage solids. When broken down, the remaining liquid passes through the outlet pipe to a soakaway and as the storage fills the septic tank must be cleaned and emptied.

Our range of Septic Tank Services include:

- **Emptying**
- **Cleaning**
- **Waste Disposal & Management**
- **Inspections**
- **Surveys**

Our fully trained engineers and comprehensive range of vehicles allow us to access a variety of tanks from limited access to varying distances.

The Alternative Drainage teamwork with several large commercial projects and properties as well as domestic properties, offering professional and expert waste management service and have implemented various programmes for managing and maintaining septic tanks and waste disposal.

“...years of knowledge and experience”

Alternative Drainage can provide initial advice and information regarding septic tanks and our guidance will include recommending the size and specification of the tank which best suits your business / domestic needs and also how often it should be emptied or desludged.

Alternative Drainage is fully equipped with modern septic tank equipment and technology ranging from multipurpose tankers to using the latest jetting and vacuum techniques.

Domestic Drainage Services

Alternative Drainage offer a wide range of domestic drainage services to households throughout the whole of Yorkshire and Surrounding areas.

All our engineers are highly skilled and trained to perform professional drainage services and they are fully equipped to carry out any drainage problems.

Our technicians will carry out a full survey on your home to identify and locate the problem before suggesting the most efficient and cost-effective solution. From unblocking a simple drain, toilet or sink in your house to repairing a damaged drain due to corrosion, Alternative Drainage have been the trusted choice of Yorkshire homeowners for over 20 years.

Our domestic drainage clearance and repair services include:

- **Manual Rodding**
- **High Pressure Water Jetting**
- **Plunging**
- **Root Cutting**
- **CCTV Survey**
- **Excavation**
- **No dig patch relining.**
- **Drain Collapse**
- **Drain Relining**

In addition, we can add a new drainage system to existing pipelines and replacement drains can be relayed to older properties if required.

Alternative Drainage understands that a blocked or overflowing drain or toilet can have serious implications for your home and the homes of others around you. Therefore it is our aim to complete every drainage job quickly, with minimal disruption and at a competitive price.

“... The trusted choice of Yorkshire homeowners for over 25 years”

Alternative Drainage approaches every job with the same high degree of professionalism, delivering first class customer service whilst offering unbeatable value for money.

Contact Alternative Drainage now on 0800 098 2065 or visit us at alternativedrainage.com for all Domestic drain repair services.

Drain Repairs

Over time drainage pipework can become susceptible to failure with common causes being tree root infestation, pipe corrosion and land subsidence.

Alternative Drainage provide a range of commercial drain and sewer repair services for both domestic properties and business across Yorkshire.

Our engineers will initially carry out a series of tests that will identify the drain or sewer problems. This may be a CCTV survey or a Dye test. Once we know what the problem is we can implement the appropriate solution and the type of drain damage will ultimately influence the method of drain repair we use.

Typical drain Commercial and Domestic drain repair services include:

- No dig pipe repair (Patch lining)

An affordable solution which is used when there is only one damaged area of pipeline within a certain radius. The patch liner is mixed with resin and an inflation tube positioned inside the patch liner. This is then inflated and placed in the pipe at the point of repair and inflated to the correct pressure. Once the resin has cured, the inflation tube is deflated and removed from the pipe.

- Manhole Benching

Manhole benching is the sand & cement haunching that sits between the manhole walls and the channel pipes. The main purpose is to stop the splashing of waste and water from incoming branch lines as this causes waste to build up in the manhole which can lead to blockages.

- No dig pipe repair (Drain Re-line)

An established method of placing a new pipe within an existing damaged pipe without excavation and with minimal disruption. The new pipe is moulded into the damaged pipe by a method called 'inversion' using water or air pressure, fitting it tightly against the wall of the new pipe.

- Excavation

Used when there is a seriously damaged drainage system or there is a need for a new pipe laying. Situations range from small domestic drain repairs to complete drainage replacement and civil works. Our services are used on a variety of drainage systems ranging from clay ware to plastic pipes and pitch fibre to concrete drains. The Alternative Drainage Team has considerable experience of drain and sewer repairs and replacing broken drains and has the knowledge and skills to complete any drain repair in any location across Yorkshire and nationwide with minimal disruption to you and your business.

Commercial Drainage Services

Alternative Drainage offer a wide range of Commercial drainage services throughout the whole of Yorkshire and Surrounding areas.

Whether you run a small coffee shop or have a large industrial unit, at Alternative Drainage we know that a damaged drain or blocked toilet can have a detrimental effect on the day to day running of any type of business. Business can be lost through delay so we pride ourselves in providing a fast local service with minimal disruption to your workplace.

We provide a full range of drainage services, from unblocking a simple drain, toilet or sink in your premises through to repairing or installing a drainage system in a construction project.

Our range of commercial drainage services includes:

- **Drain Clearance**
- **CCTV Surveys**
- **Water Jetting**
- **Root Cutting**
- **Excavations**
- **Dye tests**
- **Pump Outs**
- **Drain Repairs**
- **In-Pipe Pipe Patch & Reline Repairs**

Alternative drainage has been providing 24 hour / 7 days a week Emergency commercial drainage service to businesses across Yorkshire and nationwide for over 25 years

Our professionally trained engineers have the necessary knowledge, experience and skills to help with any drainage problems that may occur in your organisation.

In addition, all engineers are continually trained to comply with the latest legislation, with a particular emphasis on current Health and Safety Regulations.

Alternative Drainage can also provide monthly drainage programmes for your business which is why many of our customers opt for a regular 'health check' of their drainage systems to ensure prevention against a common drainage and plumbing issues that can occur.

Our public and private sector commercial customers include Leeds City Council, Morrisons, McDonalds, Burger King, Wakefield City Council, Marks AND Spencer through to housebuilders such as Strata Homes, Barratt and Taylor Wimpey.

No matter how big or small the drainage problem, Alternative Drainage approach all commercial drainage work with the same high degree of professionalism, delivering first class customer service whilst offering unbeatable value for money.

Tanker Services – Grease Traps and Interceptors

Alternative Drainage can provide a range of high-performance solutions to eliminate grease and fat discharge from domestic, commercial and industrial drainage systems by minimising the problems caused by the unwanted accumulation of waste solids, grease and fats.

A range of grease traps and interceptors can be fitted to kitchen drainage systems, preventing build up in drains and sewers.

The traps will act to effectively filter out fats, oils, and grease before it enters the drainage system. This reduces its impact on drains, pipes, interceptors, and wastewater discharge and allows the clarified wastewater flow out to the sewerage system.

Typical commercial applications include:

- **Restaurants, takeaways, and cafes**
- **Hotels, pubs, and bars**
- **Commercial Kitchens**
- **Bakeries and food processing**
- **Hospitals and healthcare facilities**
- **Manufacturing operations**
- **Industrial Process applications**
- **Sport stadiums**
- **Health and wellness centres**

Using our skills and experience of all types of grease traps and management systems, Alternative Drainage can fit a range of grease trap units to suit your requirements.

In addition, we can provide regular cleaning and maintenance of your grease system in a safe, environmentally friendly and efficient manner. Alternative Drainage can also offer 24/7 service so that your grease trap is cleaned at a time most convenient to you.

All our grease traps and grease management systems conform to EN1825 standard and also comply with building regulation's part H1 section 2.21.

Surface water interceptors

Alternative Drainage provide a regular maintenance and emptying service to remove oil, petrol and silt from surface water interceptors.

Interceptors are fitted to surface water drainage where the contaminated waters pass through the chambers before being discharging into storm water drains thereby preventing pollution and protecting the environment.

Typical applications include:

- **Public car parks**
- **Industrial & commercial site**
- **Supermarket car park**
- **Fuel station forecourts**
- **Car wash & Jet washes**

Alternative Drainage is registered with the Environment Agency under regulation 28 of the waste (England and Wales) Regulations 2011 allowing us to safely remove, transport and dispose of contaminated wastes.

The Company

Since it was established in 1989 Alternative Drainage has been setting the standard for drainage services throughout Yorkshire and Nationwide.

From repairing a blocked household drain to cleaning a septic tank to full site work, Alternative Drainage has become a leading provider of a variety of drainage services including:

- Drain Clearance
- CCTV Surveys
- High Pressure Water Jetting
- Root Cutting
